

PANEL FIXING INSTRUCTIONS

Should the cutting of panels be necessary (due to water pipes or skirting boards) a small fine toothed saw or sharp knife is recommended.

1. Fit both panels in position, locate top flanges of the panels between bath frame and rim of bath.
2. Ensure that both panels are set vertical and that the end panel is located behind front panel at corner joint.
3. To secure the panel to the wall use a piece of timber secured to the wall vertically. For the floor we recommend some rebated blocks set equal distances apart.
4. Small mirror screws can be used to secure the panel against the timber. Alternatively Velcro or Magnetic strips will secure in a neat fashion.

Illustrations and specifications are not binding in detail

QUALITY ACRYLIC BATHS MANUFACTURED IN ENGLAND

BATH FIXING INSTRUCTIONS *for* STANDARD & LUXURY RECTANGULAR BATHS

PLEASE NOTE

- Before fixing any bath or panel - remove ALL protective covering and examine carefully. The polythene film must be removed in full and the bath checked for any visible damage.
- Check that colour match is acceptable to sanitaryware and panel.

Any refixing costs or claims for wrong colour match, and/or any other faults will not be accepted - **AFTER FIXING**

FORM 68/18

ATTENTION!

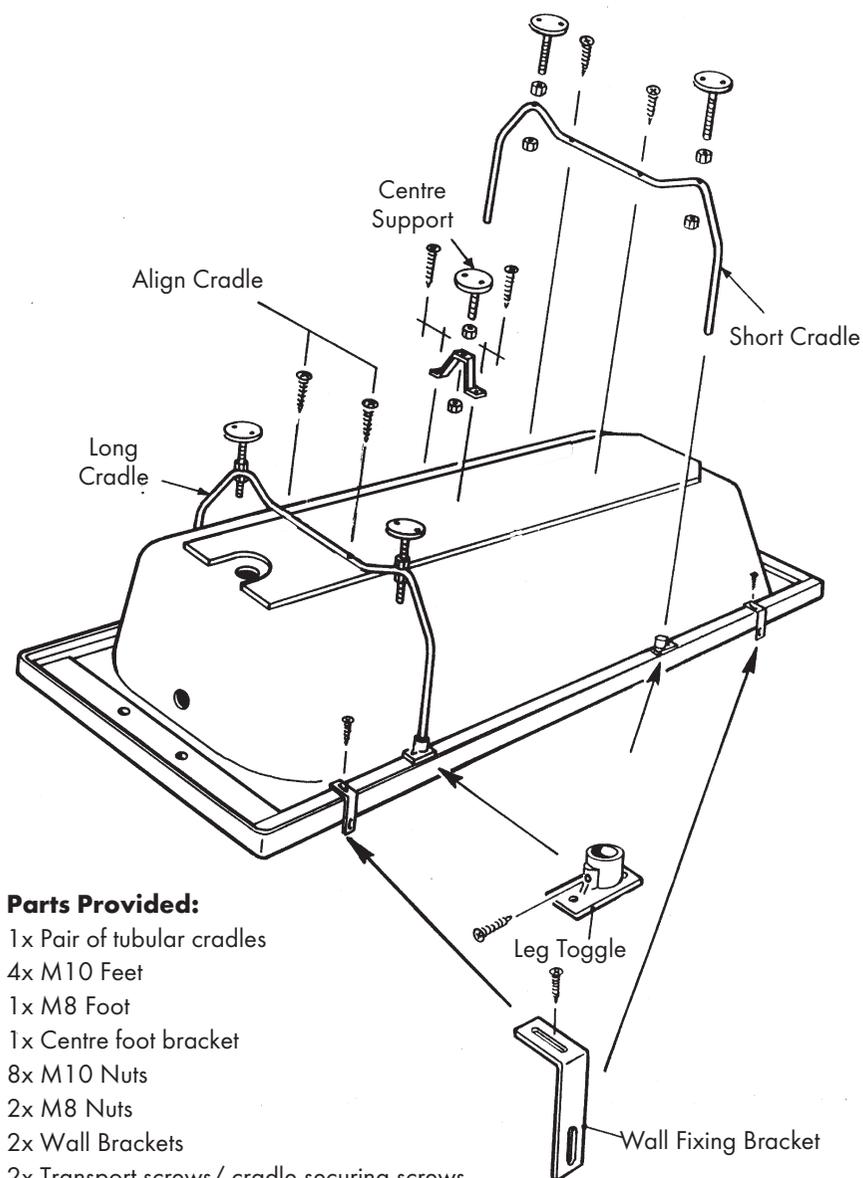

REMOVE FILM PRIOR TO FITTING

- Please note prior to fitting your Bath carefully remove all the packaging and film from the bath and examine the bath for damage and suitability of colour match
- Check the panel fit and match prior to installation
- Note instruction 9 before final fixing

No Claims for the above will be accepted once the bath is fitted

1. **Remove all** packaging including the **polyethylene film** which covers the entire bath.
2. Check that colour match is acceptable and that there is no damage on the bath that may have occurred during transit. This can only be done if the film is removed completely.
3. Remove the two tubular cradle legs from the bath frame. The longest fits at the waste end (keep the screws for instruction 4).
- 3a If the bath you have has the waste and overflow in the middle the cradle legs will be same length and as such can be secured at either end of the bath.
4. Align the cradle and screw directly into the baseboard using the 32mm (1 1/4") screws from instruction 3. **YOU MUST CHECK THE SCREW LENGTH** - Should the bath have an 'H' frame fitted to the baseboard align and secure cradle to it. If the cradle stands proud of the baseboard it can be shortened using a hacksaw.
5. Once the cradles have been secured to the baseboard of the bath secure them into the legs toggles with the self tapping screws provided.
6. Secure the adjustable centre support using screws and nuts provided to the centre of the baseboard (or 'H' frame). Attach the centre foot with nuts provided.
7. Secure the Wall Brackets to the bath frame using screws provided approximately 150mm from each end.
8. With the bath in the upright position set top face level using threaded adjustment of feet and lock-nuts. When a panel is to be fitted set bath height to height of panel.
9. **CHECK THAT THE BATH RIM IS LEVEL**
10. Before the final fixing of the bath, fit tap and waste fittings using a suitable sealing compound. When complete place bath into position, re check levels and make any final adjustments necessary. Finally secure the feet to the floor and the wall brackets to the wall. Movement may occur if not fitted correctly.

RECTANGULAR BATH

Parts Provided:

- 1x Pair of tubular cradles
- 4x M10 Feet
- 1x M8 Foot
- 1x Centre foot bracket
- 8x M10 Nuts
- 2x M8 Nuts
- 2x Wall Brackets
